

<b>AMENDMENT OF SOLICITATION/MODIFICATION OF CONTRACT</b>			1. CONTRACT ID CODE		PAGE OF PAGES 1   3		
2. MODIFICATION NO.:		3. EFFECTIVE DATE		4. REQUISITION/PURCHASE REQ. NO.		PROJECT NO. (If applicable)	
0012		AUG 26, 2005		W81W3G-2035-7181			
6. ISSUED BY Department of the Army Baltimore District, Corps of Engineers Contracting Division P.O. Box 1715 Baltimore MD 21203-1715		CODE CA31		7. ADMINISTERED BY: Contracting Division, Contracts Branch CENAB-CT-C 10 S. Howard ST. Room 7000 Baltimore, MD 21203-1715		CODE E1P0100	
8. NAME AND ADDRESS OF CONTRACTOR (No., street, county, State and ZIP Code)				(x)		9A. AMENDMENT OF SOLICITATION NO.	
				X		W912DR-05-R-0035	
						9B. DATED (SEE ITEM 11) APRIL 28, 2005	
						10A. MODIFICATION OF CONTRACT/ ORDER NO.	
						10B. DATED (SEE ITEM 13)	
CODE		FACILITY CODE					

**11. THIS ITEM ONLY APPLIES TO AMENDMENTS OF SOLICITATIONS**

	The above numbered solicitation is amended as set forth in Item 14. The hour and date specified for receipt of Offers <b>is not extended.</b>
	<b>DATE OF RECEIPT OF PROPOSALS      4:00 PM, LOCAL TIME, OCT 20, 2005</b>

Offers must acknowledge receipt of this amendment prior to the hour and date specified in the solicitation or as amended, by one of the following methods:

(a) By completing Items 8 and 15, and returning   1   copies of the amendment; (b) By acknowledging receipt of this amendment on each copy of the offer submitted; or (c) By separate letter or telegram which includes a reference to the solicitation and amendment numbers. FAILURE OF YOUR ACKNOWLEDGMENT TO BE RECEIVED AT THE PLACE DESIGNATED FOR THE RECEIPT OF OFFERS PRIOR TO THE HOUR AND DATE SPECIFIED MAY RESULT IN REJECTION OF YOUR OFFER. If by virtue of this amendment you desire to change an offer already submitted, such change may be made by telegram or letter, provided each telegram or letter makes reference to the solicitation and this amendment, and is received prior to the opening hour and date specified.

**12. ACCOUNTING AND APPROPRIATION DATA (If required)**

**13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS,  
IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14.**

	A. THIS CHANGE ORDER IS ISSUED PURSUANT TO: (Specify authority) THE CHANGES SET FORTH IN ITEM 14 ARE MADE IN THE CONTRACT ORDER No. ITEM 10A
	B. THE ABOVE NUMBERED CONTRACT/ORDER IS MODIFIED TO REFLECT THE ADMINISTRATIVE CHANGES (such as changes in paying office, appropriation date, etc.) SET FORTH IN ITEM 14, PURSUANT TO THE AUTHORITY OF FAR43.103(b)
	C. THIS SUPPLEMENTAL AGREEMENT IS ENTERED INTO PURSUANT TO AUTHORITY OF: changes clause FAR 52.243.1
	D. OTHER (Specify type of modification and authority)

E. IMPORTANT: Contractor    is not,    is required to sign this document and return        copies to the issuing office.

**14. DESCRIPTION OF AMENDMENT/MODIFICATION (Organized by UCF section headings, including solicitation/contract subject matter where feasible.)**

**THIS AMENDMENT IS ONLY FOR THE CONTRACTORS WHO HAVE ADVANCED TO PHASE 2 OF THIS SOLICITATION.**

**DESIGN-BUILD JOINT MEDICAL LOGISTICS CENTER  
FORT DETRICK, MARYLAND**

**SEE THE FOLLOWING PAGES**

Except as provided herein, all terms and conditions of the document referenced in Item 9A or 10A, as heretofore changed, remains unchanged and in full force and effect

15A. NAME AND TITLE OF SIGNER (Type or print)		16A. NAME AND TITLE OF CONTRACTING OFFICER (Type or print)	
15B. CONTRACTOR/OFFEROR		16B. UNITED STATES OF AMERICA	
15C. DATE SIGNED		16C. DATE SIGNED	
(signature of person authorized to sign)		BY (Signature of Contracting Officer)	

AMENDMENT NO. 0012 TO ADVERTISED RFP W912DR-05-R-0035  
EFFECTIVE AUG 26, 2005

SOLICITATION:

- 1) Site Visit: A third site visit will take place on, Thursday, 8 September 2005. Offerors shall meet at outside Bldg. 611, Strough Auditorium, at 10 AM.
- 2) Questions and Answers: RFI's and responses are attached for informational purposes.

AMENDMENTS:

- 3) Amendment No. 0003, Section 00100, Paragraph 8.2.2.3: Delete "Appendix B, Figure 2.6" and substitute "Appendix S, MIL-HDBK-1191, FIGURE 2-6."
- 4) Amendment No. 0003, Section 00100, Paragraph 8.2.2.4: Delete "Appendix B, Figure 2.8" and substitute "Appendix S, MIL-HDBK-1191, FIGURE 2-6."

The following items apply to RFP documents issued by Amendment No. 0004.

- 5) Section 01011, Table of Contents: Add "Appendix S – Net Area Tabulations" and "Appendix T – Substation #4 – One Line Diagrams"
- 6) Section 01011, Chapter 1, General Requirements: Delete the betterment for Parking.
- 7) Section 01011, Chapter 3, Civil Design and Site Development: Delete in its entirety and substitute attached revised Chapter 3, dated 26 August 2005.
- 8) Section 01011, Chapter 12, Telecommunications and Other Special System Design, Paragraph 12.1.3 Outside Plant: Delete Paragraph text its entirety and substitute the following: "The Contractor shall furnish and install communications distribution cables. Trenching and backfill required to install the communications cables and concrete encased duct banks shall be performed by the Contractor. The new duct bank is to be a 4 way 4 inch conduit system with one of the 4 inch ducts populated with fabric inner ducts. The duct system is to be concrete encased. The new copper telephone cable and new fiber optic cable shall run from Building 810 to the new JMLC project. The outside plant copper pair count shall be a minimum 1600 pairs. The Contractor shall calculate the actual required pair count per the requirements of the I3A. The outside plant copper cables shall be routed in an existing concrete encased duct bank from building 810 to the manhole 6A near the intersection of Schertz Street and Porter St. The 96 strands of single mode fiber optic cable shall also be routed in this existing concrete encased duct bank with fabric inner ducts within one of the 4 inch ducts. The route of the existing duct bank is from the central office in Building 810 to Manhole 42, then Northwest to Manhole 42A, then Southwest to Manhole 42B, then to Manhole 12A, then Southeast down Doughten Drive to Manhole 11A, then to Manhole 10, then Southwest down Porter

AMENDMENT NO. 0012 TO ADVERTISED RFP W912DR-05-R-0035  
EFFECTIVE AUG 26, 2005

Street to Manhole 7A, then to Manhole 6A near the corner of Porter Street and Schertz Street. From Manhole 6A the Contractor shall provide a new 4 way 4 inch concrete encased duct bank that runs to a new manhole near the site of the new JMLC project. The new duct bank shall continue from the new manhole into another new manhole outside of the communications service entrance room in the JMLC building and then into the communications service entrance room. The new duct bank shall run Northwest down Schertz Street to a new manhole near the JMLC project site, into another new manhole and into the JMLC building. The Contractor shall provide 2 new manholes near the new JMLC. The Contractor shall contact the COR for exact existing manhole locations and numbers.”

- 9) Appendix E, Program for Design: Delete in its entirety and substitute the attached revised Program for Design, dated 15 August 2005.
- 10) Appendix F, Drawings Organizational Diagram and Adjacency Diagram: Delete in their entirety and substitute the attached revised Organizational Diagram and Adjacency Diagram, dated 26 August 2005.
- 11) Appendix G, Project Rooms Report: Delete in its entirety and substitute the attached revised Project Rooms Report, dated 27 July 2005.
- 12) Appendix K, Drawings C-1, C-2: Delete in their entirety and substitute the attached revised Drawings C-1, C-2, dated August 2005.
- 13) Appendix K, Drawing E-1: Delete in its entirety and substitute the attached revised Drawing E-1, dated August 2005.
- 14) Appendices: Add attached new Appendix S, MIL-HDBK-1191, FIGURE 2-6.
- 15) Section 01012, Paragraphs 1.4.2.6 and 1.4.3.7: Delete all references to “Radon Piping.”

## Chapter 3

### CIVIL DESIGN AND SITE DEVELOPMENT

#### 3.1 DESCRIPTION

3.1.1 The site development consists of, but is not limited to site planning and layout, demolition, design of grading, storm drainage, roads, drives, parking and pedestrian walks, fencing, utilities and utility relocation, signage, landscaping, force protection, stormwater management and erosion and sediment control, and obtaining necessary permits.

3.1.2 The project is located along Porter Street southwest of the Post parade field. The site is an urban type setting occupied by both modular and permanent buildings. There is a complex network of utilities throughout the site including water, sewer, storm drainage, underground and overhead steam, gas, underground and overhead power, and underground communication ductbank.

3.1.3 The project limit is approximately 6.3 acres in size as shown on Sheet C-2 within Appendix K. It is bound by Miller Drive to the northwest. Miller Drive is an asphalt road in good condition with no curb and gutter, and drains to a turf swale and culverts along the edge of the project limit. Neiman Street is the project limit to the northeast and is an asphalt road in fair condition with concrete curb and gutter. There is currently no sidewalk along the Neiman Street project limit. An 8" reinforced concrete storm drain runs within Neiman, however minimum drainage is provided by an inlet at the intersection of Porter Street. Porter Street is the project limit along the southeast edge. Porter Street is an asphalt road in good condition with concrete curb and gutter, 4 foot turf buffer, and existing 4 foot concrete sidewalk. It is drained by a series of inlets that tap into an existing reinforced concrete pipe aligned within the street. The limit to the west is the existing Building 123 fencing and the Building 199 asphalt service drive. The existing Hamilton Street may be removed to the project limit shown, such that it will provide access to the Building 123 service drive. The area along Building 199 is presently an existing maintenance storage yard with several mature trees. The storage yard is surrounded by fencing as part of a secured perimeter for Building 199.

3.1.4 The stormwater management project limit for this project is approximately 1 acre in size. It is located south of Porter Street across from the project site. It is bound by existing parking to the northwest, existing sidewalk, trees, and buildings to the southwest, the Post boundary fence line to the southeast, and the existing Building 611 (auditorium) parking lot to the northeast. See paragraph 3.9.2 for additional information on permissible stormwater management areas.

#### 3.2 REFERENCE REQUIREMENTS AND STANDARDS:

3.2.1 The codes and standards of the most current edition listed in the appendix shall be used as standards for new construction and life safety design. When codes and standards are in conflict, the most stringent shall apply. All work shall be designed and constructed to meet all State and Federal codes, local standards and laws.

#### 3.3 SURVEY

The mapping of the available site, obtained from field survey performed in May 2005, is shown on drawing Sheets SU-1 to SU-5 in the appendix. A digital file of the mapping in AutoCAD Release 2000 is available at the following ftp site:

<ftp://www.en.nab.usace.army.mil/ftpin/Ft.%20Detrick%20JMLC/Autocad%20drawings/>

Upon contract award, the Contractor shall request an electronic copy of the digital terrain model in Autodesk Land Desktop through the Contracting Officer from the Baltimore District Design Branch. The attached survey drawings, digital files of the mapping, and terrain model are issued for information only. The design build Contractor shall have the government furnished topographic survey verified for completeness and accuracy by a licensed surveyor in the State of Maryland. Provide any additional topographic survey required for utility alignments and stormwater management outside of the survey limits. All locations and elevations of existing utilities shall be verified by test pitting prior to any connection to or intersection with the new utility.

### 3.4 STAGING AND CONTRACTOR ACCESS

#### 3.4.1 Staging Area

The location of the Contractor staging area shall be contained within the project limits labeled on the attached drawing Sheet C-2 in the appendix K. All areas disturbed by the Contractor's staging area shall be stabilized against erosion and restored back to original condition prior to completion of the project in accordance with Maryland Department of the Environment requirements. Staging of equipment, soil stockpile, and other material shall not be placed within 5 feet from any existing tree drip line.

### 3.5 DEMOLITION

3.5.1 The Contractor shall remove all structures, associated foundations, pavement, utilities, trees, and other features in their entirety required to design and construct the new Joint Medical Logistics Center. The Contractor shall be responsible as part of the design to prepare the demolished sites for construction of new site features or to backfill turf areas with proper grading and drainage. Mature and thriving trees located on the site shall be protected and incorporated into the new design when possible. See Chapter 4 for landscape requirements.

3.5.2 All existing utilities to remain on the site shall be protected during the demolition and construction process. Any damage shall be immediately repaired in accordance with the utility owner's requirements at the Contractor's expense. Utilities that provide service to the existing surrounding buildings and interfere with new construction shall be relocated. Maintaining uninterrupted utility service to these buildings during construction may be necessary and shall be coordinated with and approved by the Post and Contracting Officer. Utility lines not in use shall be completely removed when within 15 feet of the new building footprint or interfere with construction of new utilities, otherwise shall be abandoned in place. See the electrical and mechanical portion of the RFP for their respective demolition requirements.

3.5.3 The site is presently occupied by both permanent and modular buildings. The modular buildings will be removed prior to contract award and utilities capped below grade. The modular building numbers shown on the survey include

622, 623A, 623B, 623C. The Contractor shall remove all utilities associated with the modular units that impact new construction. The Contractor shall demolish three existing permanent buildings that presently occupy the site. Building 660 is one-story with a basement. It is a CMU building and has a footprint of approximately 10,720 square feet. Building 621 is a one story metal sided steel building with no basement and a footprint of 3,550 square feet. Building 623 is a one-story steel building with no basement and a footprint of approximately 2500 square feet. These three buildings and all adjacent site features, including stairs, sidewalks, foundations, etc., associated with all buildings to ever have occupied the project limits shall be removed from the site in their entirety. The buildings may contain lead paint or asbestos. See the environmental Chapter 7 for more information. Water service to the buildings shall be shutoff and service piping capped at the main. Sanitary sewer laterals shall be plugged or capped at the main sewer. Overhead electric and telephone must be cut from the buildings. The Contractor shall coordinate with Ft. Detrick DIS to verify lines to be removed. A detailed demolition plan shall be developed and submitted per Section 01012.

3.5.4 Two additional permanent buildings offsite may be demolished under this contract as an optional bid item. Their numbers are 1423 and 1432 and are approximately 41,303 and 11,681 square feet respectively (See Appendix K). The buildings are one story. All associated site features shall be removed in their entirety and utilities capped at main lines as described above. The existing exterior light poles shall be removed by the Contractor. Interior equipment and furniture will be removed by the government prior to Contractor possession. The speaker pole for the mass notification system located near 1423 and 1432 shall remain in place, operational, and be protected by the contractor during demolition of the buildings.

3.5.5 All materials shall be disposed of outside the limits of Government controlled lands. Disposals shall be in accordance with the federal, state, and local regulations. The Contractor shall notify the Contracting Officer if any material to be disposed of is found to contain hazardous, toxic, biological, or radiological substances. Rubbish and debris shall be removed from Government property promptly to avoid accumulation at the project site. Demolition shall be specified by the appropriate UFGS demolition section.

3.5.6 The Contractor shall remove or relocate existing utilities as necessary to construct the new stormwater management pond. See paragraph 3.9.2 for additional information regarding construction of the new stormwater management features.

### 3.6 FORCE PROTECTION REQUIREMENTS

This project has a low threat level resulting in a low level of protection. The site shall be designed in accordance with the October 2003 DoD Minimum Antiterrorism Standards for Buildings, UFC 4-010-01. The Contractor is responsible for complete compliance with this document, including the items listed below. Prospective bidders shall maintain a minimum 82-foot setback between the building and any areas accessible by vehicles, including roads and proposed parking, unless otherwise shown on sheet C-2. One exception to the criteria is the 33 foot JMLC building offset from the Building 199 service drive (Post approval has been granted). The post will restrict parking along Hamilton Street to a distance of 82 feet from the JMLC building envelope and along the Building 123 and 199 service drives as shown on the attached Sheet C-2. The secured parking lot as described under "3.7 New

Construction" can be placed within this 82 foot JMLC buffer but not closer to the facility than 33 feet. A drop off area at the main entrance of the building can be within the 82 foot standoff, provided "No Parking" signage is installed, but not closer than 33 feet from the building. These areas shall be enforced through the use of permanent 6-inch curbing, bollards, and/or landscaping planters. A minimum of 33 feet shall be maintained between structures. Dumpsters shall be a minimum of 82 feet from the building. It is mandated that the standoff distances listed above be met, therefore not requiring structural hardening in accordance with UFC 4-010-01. The new parking lot shall be designed to avoid long aisles perpendicular to buildings (when possible) such that vehicles would have a direct path towards the facility. Vehicular access to the building, either for delivery, maintenance, or emergency purposes, shall be restricted. Access control measures (see UFC 4-010-01, B-1.4 Standard 4. Access Roads) can be operational in nature (i.e., drop arm, recreation type gates, or prohibitive signage, etc.). Permanent objects including mechanical equipment, landscaping, etc., greater than 6 inches in height should not be located within 33 feet of the building. Questions on force protection measures shall be coordinated through the Contracting Officer.

### 3.7 NEW CONSTRUCTION

#### 3.7.1 General Requirements and Site Layout

3.7.1.1 The project is an administrative facility to support nine different medical logistics organizations. The finished project will consist of the optimum layout of all the features required, including but not limited to the administration building, a secured vehicle parking lot, tenant parking, pedestrian walkways, delivery/service access, utilities, and stormwater management features. The Contractor shall site the required features for this project within the limits shown on sheet C-2 in the appendix, and in accordance with the restrictions listed within this document. The building should be sited so that the primary face of the building is towards the southeast (Porter Street), the east (existing Neiman Street), or a combination. The facility shall have a pedestrian drop off area at its main entrance. It is anticipated that the facility mechanical units will be located along Miller Drive, unless this is not the optimum solution for the design. Emergency access is required around the facility. Sidewalks and clear areas around the facility will meet minimum customer emergency requirements. Additional items of consideration in siting the project features will be force protection, aesthetics, optimum drainage, fire protection, environmental\ sustainability concerns, safety, and convenience for vehicles and pedestrians. Outside mechanical and electrical units, dumpsters, etc., shall be screened with suitable landscaping or walls as per the Ft. Detrick Installation Design Guidelines (IDG) and in accordance with force protection standards. The new building is required to be handicapped accessible.

3.7.1.2 Once the design of the layout for this project is complete, the Contractor shall show a dashed line on the plans delineating an area that the building could be expanded by 25%. This area shall not impact the optimal design for this project, and shall only be drawn once the JMLC site has been designed. This area is provided for information only.

#### 3.7.2 Parking and Access Drives

3.7.2.1 The Contractor shall provide the maximum number of parking spaces within the project limits. This number shall include the required number of handicapped accessible spaces. This number does not include the secured parking area describe in this section. The Contractor is encouraged to design a traffic efficient layout in accordance with Fort Detrick installation requirements, force protection requirements, and all others applicable that maximizes parking efficiency. The parking areas and access drives shall be designed to provide convenient safe access and circulation (including deliveries and fire protection) within the facility areas.

3.7.2.2 The parking lots shall be designed in accordance with the Installation Design Guidelines, including 9 foot X 18 foot parking stalls. Parking lots and access roads shall be bituminous pavement except in front of dumpsters where concrete shall be used.

3.7.2.3 Minimum parking access drive width shall be 24 feet for all new work. Minimum turning radius for all new intersections with existing Ft. Detrick roads shall be 25 feet. Minimum parking island radius at aisle intersections shall be 15 feet. The designer shall consider all types of vehicles traversing and parking on these facilities. Vehicles shall include but not be limited to the following: passenger cars, fire trucks, emergency vehicles, trash removal, delivery service, and utility vehicles. Once the contract is awarded, the Contractor shall verify that the design has concurrence through the Contracting Officer. Access drives shall provide convenient vehicle access to all maintenance items. Provide traffic markings as necessary in accordance with the Manual of Uniform Traffic Control Devices and in accordance with current installation markings. Parking stripes shall be white.

3.7.2.4 The Contractor shall provide a secured parking area for five HUMVEE vehicles with trailers (approx. 6x30 each), one 5-ton truck (8x30), three shipping containers (8x40), and two small shipping containers (8x8). Sufficient space for turn-around and backing should also be provided. This area shall be separate from the primary parking and not detract from the primary face of the building aesthetically.

### 3.7.3 Service Access

A paved access drive shall be designed to allow standard delivery type vehicles such as vans, small box trucks, and building service\maintenance vehicles to reach the building for deliveries. The drive shall be coordinated with the architectural building access requirements and the existing overhead steam line if provided from Miller Drive. The Contractor shall design an optimal access within the requirements. The access drive design shall also comply with section 3.6 FORCE PROTECTION REQUIREMENTS.

### 3.7.4 Building Entrance

The Contractor is encouraged to provide a pedestrian friendly building entrance plaza with landscape, pavers, and seating areas.

### 3.7.5 Walks

3.7.5.1 Exterior concrete sidewalks shall be constructed along parking lots and roads in accordance with the Installation Design Guide. Curb cuts shall be provided for handicapped accessibility at all intersections of walks and drives. Minimum thickness of concrete sidewalks shall be 4 inches on 4

inches of #57 stone; minimum width shall be 4 feet. When paralleling parking areas or along main walking routes, walks shall be at least 6 feet wide. Sidewalk shall be constructed along the Neiman Street project limit. The Contractor shall restore all access routes to existing buildings and current pedestrian patterns as approved by the Contracting Officer. See Chapter 11 for the exterior electrical requirements of the site.

3.7.5.2 Contraction joints shall be spaced at 3 to 5 foot intervals to form square panels. Panels where the length exceeds the width by more than 25% and odd shaped panels shall be reinforced with 6 inch X 6 inch - W2.9 X W2.9 wire mesh. Expansion joints shall be installed at 30 feet maximum spacing and at intersections of walks, curbs and any other structure.

#### 3.7.6 Curb and Gutter and Dumpster Pads

3.7.6.1 Streets and parking lots shall be provided with combination concrete curb and gutter. Curbs shall be depressed at entrances to driveways with gradients providing positive drainage. Rolled combination curb and gutters are not permitted. Required curb height is 6 inch for all curbing. Curb cuts shall be provided as necessary to direct stormwater to various Best Management Practices in accordance with the MDE stormwater management requirements.

3.7.6.2 A concrete dumpster pad with truck access shall be provided. Minimum thickness of concrete pad shall be 6 inches on 6 inches of #57 stone. The pad shall not be within 82 feet of the building to meet force protection requirements. The pad shall be screened in accordance with the Installation Design Guide to match the building. The dumpster enclosure shall be large enough to easily accommodate 2 standard front-loading type dumpsters and to allow convenient access for unloading.

#### 3.7.7 Pavement

See Chapter 2 for Geotechnical requirements.

#### 3.7.8 Fencing

The Contractor shall realign the existing 6' chain link fence that presently secures the perimeter of Building 199. The fence shall be aligned along the asphalt service drive tying into the Building 199 access gate at one end, and the Building 123 existing fence line at the other end. Any fence not fit for relocating shall be replaced with new. A secured perimeter for Building 199 must be intact during construction of this project.

An 8-foot high chain link fence shall be required around the secured parking lot. Fence shall include 3 strands of barbed wire along the top and an adequately sized gate to allow access for the vehicles previously listed. A latch/lock mechanism shall be provided to allow the lot to be secured and keys turned over to the installation.

#### 3.7.9 Provisions for the Handicapped

Ramps shall be used along all intersection of sidewalks and roads within the project limits and at building entrances. Parking spaces for the handicapped shall be provided. All handicapped site features shall be in accordance with the latest edition of the Uniform Federal Accessibility Standards (UFAS).

### 3.7.10 Signs

#### 3.7.10.1 Street and Building Signs

Street and traffic control signs shall conform to the Manual of Uniform Traffic Control Devices. Non traffic control signs as well as building signage shall match adjacent area signs and conform to the Fort Detrick Installation Design Guide.

#### 3.7.10.2 Historic Signage

A small historic site marker (small plaque) is currently located along the northern side of Porter Avenue sidewalk between Schertz and Neiman Streets. This sign is part of a historic walking tour and describes a historic hospital. Contractor shall incorporate the plaque into the design in the proximity of its current location. Relocation of the sign shall include a decorative wood or vinyl pedestal on a small paver area enough to stand on with minor landscape.

#### 3.7.11 Sustainable Design and Goals

The site work shall be designed in general accordance with ETL 1110-3-491, Sustainable Design For Military Facilities and the project shall achieve a minimum SpiRiT Sustainable Project Certification Level of Silver.

#### 3.7.12 Landscaping

See Chapter 4 for guidance.

### 3.8 GRADING

#### 3.8.1 General

Positive drainage shall be provided for all areas and existing drainage ways shall be utilized to the extent possible. Swales between buildings and parking areas shall be avoided if possible, unless utilized for Stormwater Management Credit. The Contractor will grade the site such that all stormwater management BMP's are functional and in accordance with Maryland Department of the Environment requirements as coordinated through the Ft. Detrick Environmental Management Office. Parking areas shall be graded such that stormwater is directed off to the sides and not down the center of the parking isles. Earthwork shall be balanced to the extent possible without compromising the design.

#### 3.8.2 Adjustment of Existing Structures

All manholes, valve boxes, inlets, or structures that will remain functional within the project limits shall be adjusted to the new finished grade for paved areas. Manholes and valve boxes shall be placed 4 inches above finished grade in turf areas while storm drain inlets shall be sumped for appropriate drainage. Where inlets, manholes, or valve boxes fall within a roadway or parking lot, the existing frame and cover shall be removed and replaced with a heavy-duty frame and cover. All structures shall be of a type suitable for the intended use and shall conform to the requirements of the applicable section of these specifications.

#### 3.8.3 Borrow and Waste

Stockpiled topsoil shall be reused on this project site. Borrow materials shall be obtained from sources outside the limits of Government-controlled land. The source of borrow material shall be the Contractor's responsibility. The Contractor shall obtain from the owners the right to procure material, shall pay all royalties and other charges involved, and shall bear all the expense of developing the sources, including rights-of-way for hauling. A "clean certificate" (insuring that soils imported do not contain any hazardous constituents) is required for all soils imported from off of Government lands. Any surplus suitable materials not required for fill shall be removed from the Post. Non-suitable materials shall be disposed of by the Contractor at his own expense and responsibility outside the limits of Government-controlled land. Contractor is required to submit from the owner of the disposal site written permission for disposing of excess or non suitable materials and soils.

#### 3.8.4 Sidewalks and Curb and Gutter

Concrete walks shall have a transverse grade of 2 percent. Maximum desirable longitudinal walk grade shall be 4 percent and an absolute maximum grade of 8.33 percent. The use of steps in walks will be avoided whenever possible. The use of single riser steps is especially discouraged. When steps are unavoidable, they should have at least three risers and will be provided with handrails. Barrier curbs shall be used along asphalt roads, drives, and parking lot edges.

#### 3.8.5 Transverse Parking Area Grades

- a. Desirable minimum of 2 percent.
- b. Absolute minimum of 1.5 percent for flexible pavement and 1 percent for rigid pavement.
- c. *Maximum* of 2 percent at handicap parking.

#### 3.8.6 Longitudinal Parking Area Grades

- a. Maximum of 5 percent

#### 3.8.7 Ramp Grades

Must comply with Americans with Disabilities Act Accessibility Guidelines (ADAAG) for Buildings and Facilities standards.

#### 3.8.8 Gutter Grades

- a. Desirable minimum of 0.8 percent.

#### 3.8.9 Building Floor Elevation

Building finished floor elevation shall be set to ensure that the required minimum and maximum grades are met. It is preferred that the finished floor elevation be set a minimum of 8 inches above exterior finished grades.

#### 3.8.10 Grades Away From Building

- a. 5 percent within 10 feet of building

b. For areas greater than 10 feet beyond the building, minimum 2% slope in the direction of drainage away from the building.

#### 3.8.11 Overlot Grades

Provide 2 percent minimum positive drainage for all areas.

#### 3.8.12 Ditch Slopes

Minimum grade of 1.0 percent for channelized flow.

#### 3.8.13 Ditches

Ditches shall be graded at non-erodible slopes or the ditch shall be lined with an appropriate material to prevent erosion. A design storm with a return period of at least 2 years shall be used to determine erodibility of ditches and swales. The depth of ditches along pavement shoulders shall be such that the water surface from the 10-year design storm is below pavement sub-base and base courses which daylight through the adjacent shoulder.

### 3.9 STORM DRAINAGE

#### 3.9.1 Determination of Storm Runoff

The computation of runoff will be accomplished by the Rational Method, as defined in the Maryland State Highway Drainage Manual and Chapter 2 of TM 5-820-4, Drainage for Areas Other Than Airfields. Where detailed consideration of ponding is required, computation should be by unit-hydrograph and flow-routing procedures. When designing stormwater management facilities, computations shall be in a format acceptable to the Maryland Department of the Environment.

##### 3.9.1.1 Design Storm Return Period

Storm drains and culverts shall be sized for a design storm with a return period of 10 years. Culverts under critical roadways shall be sized for a design storm return period of 100 years. Provisions shall be made to protect all buildings and critical structures from a major storm event with a return period of 100 years.

#### 3.9.2 Stormwater Management

It shall be the responsibility of the Contractor to design the required stormwater management (SWM) facilities and to submit completed plans to the Maryland Department of the Environment Water Management Administration for Stormwater Management, Erosion and Sediment Control, and NPDES permits. Permits must be obtained prior to start of any construction activity. The Contractor is encouraged to hire a permitting expeditor to review the submissions on behalf of MDE, and to meet with MDE and the expeditor early in the design process to minimize the permitting process duration.

This project will be considered redevelopment in accordance with the SWM manuals. The Contractor shall utilize the amount of existing impervious removed under this contract and recently removed by others (as permitted by MDE) to reduce water quality permitting requirements (See sketch C-1). It is anticipated that the stormwater management will be accomplished through the

combination of Best Management Practices (BMP's) incorporated into the JMLC project site, and some method of quality and volume control south of Porter Street. The use of BMP's (such as bioretention areas) within the JMLC site layout will also help to meet the SpiRiT sustainability rating of Silver. The Contractor is encouraged to use these BMP's, however; BMP's used around the JMLC building itself will be subject to review from the Post and US Army Corps of Engineers to assure they do not detract from the facility aesthetically. An example of this would be avoiding steep or excessive excavations within the turf area around the building.

The Contractor is responsible for designing the most drainage efficient measures that are in accordance with the Maryland Stormwater Management Guidelines for State and Federal Projects, July 2001, and conducive to an expeditious permitting process. It is the Contractor's responsibility to incorporate and fulfill any other MDE requirements necessary to complete this project. All original permits and a copy of the approved plans and report must be held on site at all times. A copy of all permits and approved plans and report shall be provided to the Contracting Officer. It should be noted that the project lies within the Carroll Creek watershed and is subject to 100-Year controls.

There is an area designated on sheet C-2 in the appendix labeled as the stormwater management expansion area. The Contractor shall use this area for any portion of management that exceeds the SWM Project Limits.

### 3.9.3 Storm Drainage System Design

The Contractor shall be responsible for the complete design of the storm drainage system. The new storm drainage system shall be coordinated with surrounding properties to ensure runoff does not cause damage. Minimize the use of curb openings with flumes to drain water from streets and parking areas except in unique cases required for stormwater management permitting. Drainage of runoff from turfed areas onto pavements shall be minimized. New manholes shall be elevated 4 inches above grade for turf areas and at finished grade for paved areas.

Structures shall be located at all changes in direction of storm drain line, at the intersection of two or more storm drain lines, and where required to intercept rainfall runoff. Storm runoff in streets and parking areas with curbing will be collected using curb inlets or area inlets. Drainage of runoff from turfed areas onto pavements shall be minimized. Where possible, a minimum drop of .1 feet between inverts of equal diameter storm drain pipes shall be provided at the centerline of drainage structures. Where storm drain pipes are of different diameters, the pipe crown elevations should be matched at the drainage structure. Storm drain pipes shall have a minimum diameter of 12 inches. Storm drain lines shall be located outside of paved areas to the extent possible. Under no circumstance shall storm drain lines be located beneath buildings. Erosion control shall be provided for all storm drain structures during construction as approved by MDE.

The Contractor shall refer to the Maryland SHA Book of Standards for any storm drain details required by the design. The Contractor shall provide details for any other drainage structures not found in the Book of Standards.

#### 3.9.3.1 Hydraulic Design

New storm drain pipes shall be designed for gravity flow during the 10-year design storm. The hydraulic grade line shall be calculated for the storm drain system and all energy losses accounted for. Design computations shall adhere to procedures contained in the Maryland State Highway Drainage Manual and TM 5-820-4. Storm drain systems shall be designed to provide a minimum flow velocity of 2.5 feet per second when the drains are one-third or more full.

#### 3.9.3.2 Manholes

Diameter of manholes shall be large enough to accommodate pipes entering/exiting the manhole. Manhole cast iron frames shall have a minimum opening diameter of 2 feet. Galvanized steel ladders shall be provided as detailed in the State of Maryland Book of Standards.

#### 3.9.3.3 Area Inlets

Area inlets shall be properly sized and designed to accommodate the design flows. All grates shall be of a "bicycle safe" design.

#### 3.9.3.4 Standard WR Inlets

Parking area inlets at building entrances shall be avoided if possible. Inlets along two-lane streets shall be spaced and sized in accordance with the Maryland State Highway Drainage Manual. The spread of flow onto roadways between inlets and ponding onto the roadway at low points are not permitted. All inlet grates shall be bicycle safe.

#### 3.9.3.5 Head walls and Flared End Sections

Unless otherwise approved, head walls or flared end sections shall be provided at the ends of culverts and at storm drain outfalls. Protection from erosion and scouring at head wall and flared end section outfalls shall be provided as needed in accordance with MDE standards.

#### 3.9.3.6 Culverts

Culvert pipes shall have a minimum diameter of 18 inch wherever possible.

#### 3.9.4 Roof Drains

Drainage from the roof areas shall be designed as to not cause an ice hazard. Downspouts that are located in areas that could cause a safety or maintenance concern (example: building entrances) shall be collected underground and conveyed to the storm drainage system. Design of underground roof drain collection systems shall be done in accordance with the International Plumbing Code. Connections from downspouts to the underground collection pipes shall be via cast iron boot with cleanout. Downspouts discharging to the surface shall be provided with splash blocks.

#### 3.9.5 Storm Drain and Culvert Pipe

The Contractor shall use a minimum Class III reinforced concrete pipe under all paved surfaces. Pipe, bedding, and backfill shall be of adequate strength (or stiffness) to support the earth, live, and construction loads imposed on the pipe. Only pipe materials that have a minimum design service life of 50 years shall be allowed for permanent installation. As a minimum,

all pipe joints shall be soil tight. The Contractor shall specify watertight resilient pipe connectors at drainage structures when the water table is at or above the pipeline.

#### 3.9.5.1 Concrete Pipe

Reinforced concrete pipe shall be a minimum Class III. Concrete pipe shall be assumed to have a minimum design service life of 50 years. Concrete culverts and storm drains shall be protected by a minimum of 3 feet of cover during construction to prevent damage by heavy construction equipment.

#### 3.9.5.2 Corrugated Metal Pipe

Corrugated Metal Pipe shall not be used.

#### 3.9.5.3 Plastic Pipe (to be used for subdrains, roof collectors, and within turf areas)

Stiffness of the plastic pipe and soil envelope shall be such that the predicted long-term deflection shall not exceed the lesser of manufacturer's requirements or 7.5 percent. Plastic storm drains shall be protected by a minimum of 3 feet of cover during construction to prevent damage by heavy construction equipment. Split couplers shall not be allowed for corrugated high-density polyethylene pipe. Plastic pipe shall be assumed to have a minimum design service life of 50 years.

### 3.10 WATER SUPPLY

#### 3.10.1 Applicable Criteria

UFC 3-600-01 Unified Facilities Criteria (UFC), Fire Protection Engineering for Facilities.

#### 3.10.2 Existing Conditions

Elevated water storage is located in the site vicinity. Distribution is supplied through an 8 inch main north of the site along Miller Drive, and another 10 inch main to the south along Porter Street. There is a network of branched 8", 6" and smaller service lines on site that will be impacted by the new JMLC building.

#### 3.10.3 Water System Data

##### 3.10.3.1 Storage

Two elevated water tanks are in the site vicinity. Capacities of tanks WT 725 and WT 1057 are 300,000 gallons and 500,000 gallons respectively. The Contractor shall assume that existing storage facilities are adequate.

##### 3.10.3.2 Supply

The Contractor shall assume that water supply is adequate when connections are made as indicated below. Refer to Chapter 8 - Fire Protection and Chapter 9 - Plumbing for other service requirements inside the building. Hydrant flow test data is in Chapter 8.

##### 3.10.3.3 Connections

New connections shall be made to the existing 8" main along Miller Drive and to the existing 10" main along Porter Street. Connections shall be arranged to provide looped distribution around the facility.

#### 3.10.4 General

Contractor shall secure all permits for the water system addition as required by the Maryland Department of the Environment, the Ft. Detrick DPW, and all applicable agencies. Where there are criteria conflicts between different agencies, the most stringent criteria shall apply. Water mains under and within 15 feet of the proposed building shall be removed. Any mains that will stay active shall be relocated to at least 15 feet beyond the building perimeter. Relocated mains shall be new materials, minimum diameter same as original piping. The Contractor shall provide all material, labor and incidentals to maintain water service to all functional buildings during construction. The Contractor shall submit a work plan for all relocations and connections. Abandoned lines under new paving shall be removed, or filled with flowable fill or liquid grout. Piping materials and installation beyond 5 feet from the building shall comply with UFGS 02510 Water Distribution System except as indicated herein. Piping less than 3 inch diameter shall be plastic or copper. Piping 3 inch diameter or larger shall be plastic or ductile iron. Water lines shall be installed to provide a minimum of 4 feet earth cover above the pipe from the finished site grade.

#### 3.10.5 Distribution and Service

Distribution lines shall be considered as that part of the system supplying fire hydrants and service connections. Distribution lines shall not be less than 8 inch diameter, and shall be sized for the fire flow plus any domestic, industrial, or other demand that cannot be restricted during a fire. Distribution shall be looped with no dead ends to provide at least 50% of the required fire flow in the event of a single break. Fire protection shall be in accordance with Chapter 8.

Contractor shall provide design calculations, including all hydrant flow test data and mapping, showing that the flow and pressure requirements for all water demands are met. For yard piping, a Hazen Williams coefficient of C=100 shall be used for existing mains and C=130 for new mains.

Domestic service lines shall be sized for peak flow based on fixture units as per the National Standard Plumbing Code. Maximum velocity shall not exceed 6 feet per second.

Isolated high points in the mains shall be avoided. Where this is not feasible, air and vacuum relief valves shall be provided at high points, and installed in a concrete vault.

##### 3.10.5.1 Cathodic Protection

Cathodic protection requirements for water lines shall conform to Chapter 11 - Electrical.

##### 3.10.5.2 Fire Hydrants

Fire hydrants shall be dry barrel type. A shutoff valve shall be provided between the hydrant and point of connection to the distribution line. Fire

hydrants shall be made accessible around the facility from adjacently paved roadways or service drives. Space fire hydrants such that all parts of the building exterior can be reached by hose lengths of not more than 350 feet. There shall be a fire hydrant sited within 150 feet of each building fire department connection. Hydrant laterals shall be at least 6-inch diameter and shall not exceed 100 feet in length. Hydrant connections shall comply with Post Fire Department Standards. Hydrants shall also comply with requirements of Chapter 8.

#### 3.10.5.3 Valves

Valves shall be gate type. On plastic lines 4 inch diameter and larger, valves shall be supported and secured to a concrete anchor block.

##### 3.10.5.3.1 Distribution Valves

Valves on distribution mains shall be arranged such that a total of five hydrants and sprinkler systems, or not more than three sprinkler systems, are out of service due to a single break. Each connection to the existing distribution grid shall have a valve. There shall be a valve on the distribution loop between the sprinkler service and associated fire hydrant used to supply the building fire department connection.

##### 3.10.5.3.2 Service Valves

Each building service and fire hydrant shall be provided with a shut off valve located as close to the distribution main as possible. A post indicator valve (PIV) shall be installed on each sprinkler service.

##### 3.10.5.3.3 Valve Boxes

Valve boxes shall be cast iron.

##### 3.10.5.4 Traffic Protection

In areas where traffic is a concern with fire hydrants, indicator posts or valve vaults, concrete filled steel bollards shall be provided. The bollards shall be at least 4 inches in diameter and bolted to the pavement via flange plates or concrete encased in the earth. The bollards shall be painted a contrasting color such as red or yellow.

##### 3.10.5.5 Main Connections

Connections to mains shall be made by a tapping sleeve and valve whenever feasible to minimize disruption of service. If a tapping sleeve cannot be used, connection shall be with a mechanical tee and valve. Dry taps shall be arranged through the Contracting Officer to minimize interruptions to service. Work plan shall be submitted for all connections to the existing system. When connections involve system outages that cannot be tolerated as determined by the Contracting Officer, the line shall be locally isolated using stopples.

##### 3.10.5.6 Disinfection

Disinfect and flush all new water lines and any existing lines that do not remain pressurized during construction

#### 3.10.5.7 Pipe Bedding

Pipe bedding materials shall conform to ASTM C33, coarse aggregate, size #67. Place bedding from 6 inch below pipe to 12 inches above pipe for plastic materials, and to springline of pipe for other materials.

#### 3.10.5.8 Valve Vaults

Valve vaults shall be precast concrete and furnished with iron manhole frame and cover and sump drain. Pipe penetrations through structures shall be sleeved. Sleeves shall be collared and annular spaces sealed watertight. Piping in vaults shall be ductile iron with flange joints.

### 3.11 SANITARY SEWER

#### 3.11.1 Applicable Criteria

TM-5-814-1 Sanitary and Industrial Wastewater Collection - Gravity Sewers and Appurtenances.

#### 3.11.2 Existing Conditions.

##### 3.11.2.1 Sanitary Sewer System

Existing buildings in the area are served by gravity sewers. There are existing 8 inch sewers south of Hullinghorst Street that cross the project site.

##### 3.11.2.2 Contaminated Sewer System

The Post also has a separate collection system for contaminated wastewater. These sewers are labeled by the symbol LS on the plans, and convey hazardous and toxic wastes to a special treatment facility. The Contractor shall confirm location, and follow all Post safety guidelines when working around these sewers.

#### 3.11.3 Sewer Connections

Gravity connections from new facilities shall be made at or between manholes WWMH 43F, WWMH 43E and WWMH 43B. The Contractor shall assume that existing sewer capacity is adequate for new facilities connected at or between WWMHs 43F, 43E and 43B.

#### 3.11.4 Flow Data

The new facility has an average daily flow of 30,000 gpd based on 1,000 occupants at 30 gallons/capita/day. Peak flow based on fixture units is about 100 gpm.

#### 3.11.5 General

Contractor shall secure all permits for the sanitary system addition as required by the Maryland Department of the Environment, the Ft. Detrick DPW, and all applicable agencies. Where there are criteria conflicts between agencies, the most stringent criteria shall apply. Remove sewer piping and manholes under and within 15 feet of the proposed building. Any sewers that will stay active shall be relocated to at least 15 feet beyond the building

perimeter. Relocated sewers shall be constructed of new materials at same minimum slope as new lines. All active sewers in the project area shall remain active throughout construction. Contractor shall provide all material, labor and incidentals required to maintain flow in existing sewers and services to active buildings at all times. The Contractor shall submit a work plan for all relocations, connections and bypass arrangements. Abandoned lines under new paving shall be removed or completely filled with flowable fill or liquid grout. Abandoned manholes shall be removed, or backfilled with flowable fill or compacted gravel; remove top two feet of manhole before placing backfill. Avoid placing sewer under pavement whenever possible.

#### 3.11.6 Sewer Lines and Appurtenances

Building connections shall be sized based on drainage fixture units in accordance with the National Standard Plumbing Code. The minimum size of building service laterals shall be 6 inch diameter. The minimum size of collector sewers shall be 8 inch diameter. Manning's equation with coefficient of 0.013 shall be used for computation of all pipe flows. Minimum slope for piping shall be 1% for lateral sewers, and 2.2% for collector sewers. Materials and installation shall conform to UFGS 02531 Sanitary Sewers except as indicated herein. An earth cover of 3 feet or more shall be maintained on all sewers in the project area. Active sewers shall be replaced when earth cover is less than 3 feet. The Contractor shall confirm that sewers in the project area can withstand all structural loads. Any pipe or manhole that is structurally deficient shall be replaced with suitable and new materials. Existing manholes to remain shall be adjusted to new grades. Connections to existing sewers shall be made using a manhole. Piping shall be installed with bedding materials as indicated below.

##### 3.11.6.1 Pipe

Piping shall be plastic, cast iron, ductile iron or vitrified clay. Vitrified clay pipe shall be extra strength. Pipe joints shall be compression type with flexible watertight gasket.

##### 3.11.6.2 Pipe Bedding

Pipe bedding materials shall conform to ASTM C33, coarse aggregate, size #67. Place bedding from 6 inch below pipe to 12 inch above pipe for plastic materials, and to springline of pipe for other materials.

##### 3.11.6.3 Cleanouts

Exterior cleanouts shall be provided on building laterals at directional changes, and in the middle of straight runs longer than 150 feet. Cleanouts shall be two-way type to allow cleaning in either direction.

##### 3.11.6.4 Manholes

Manholes shall be provided at the points of connection to existing lines, and at all changes in direction, size or slope of collector sewers. Manholes shall not be spaced more than 350 feet apart. Manholes shall be precast reinforced concrete sections, flanged base monolithic with riser to at least 12 inches above top of pipe. At least 6 inches of bedding shall be placed under the base; granular ASTM C33, coarse aggregate size #4, compacted to 100%. Inside diameter of riser sections shall be a minimum of 4 feet. Cover opening shall be 2 feet diameter. Manhole bench and invert channels shall be

formed in concrete. Manhole joints shall be double-strip non-hardening butyl rubber mastic adhesive. Frames and covers shall be cast or ductile iron and secured to concrete with external preformed rubber joint seals. Pipe connections shall utilize a flexible watertight rubber boot or sleeve secured with a stainless steel clamp. When manhole depth is greater than 4 feet and up to 12 feet, steps shall be provided. Manhole steps shall be rated for 300 pound loading and securely embedded in concrete. When depth of manhole exceeds 12 feet, a steel ladder shall be used in lieu of steps. Avoid placing manholes where the tops will be submerged or subject to surface water inflow. Manholes shall be designed for uplift under empty conditions, assuming the groundwater table can reach the top of manhole sidewalls. Install a pipe joint at each connection 2 feet maximum from outside wall.

#### 3.11.6.4.1 Manhole Cover Adjustment

Adjust manhole covers flush with finished grade in paved areas, and as directed by the Contracting Officer for other areas.

#### 3.11.6.5 Connections to Existing Manholes

Pipe connections to existing manholes shall utilize a watertight rubber gasket as specified for new manholes. Manhole benches shall be reworked to accommodate new flow conditions.

FIGURE 2-6

NET AREA TABULATION

The net floor area of a space is measured from the interior surface of the walls that enclose the space. Exterior walls, interior partitions, columns, structural members, and internal circulation space for other than individual occupancy(ies) are excluded from the net floor area.

Provide a tabulation of net areas, by room, in thirteen columns as follows:

- a) Room Code Number From Program For Design (PFD),
- b) Functional title of room,
- c) Number of rooms,
- d) Net area of room from Program For Design,
- e) Total net space programmed for rooms [Product of cols.(c) x (d)],
- f) If Add/Alt - allocated to unaltered existing space,
- g) If Add/Alt - allocated to altered existing space,
- h) If Add/Alt - allocated to new space,
- i) Net individual room areas as designed,
- j) Difference between program and design [columns (i) minus (d)],
- k) Percent variation between program and design [cols (j)/(d)x100%],
- l) Notes. Provide justification if the deviation listed in k) is more than 10 percent. Rooms of 4.65 m<sup>2</sup> (50 ft<sup>2</sup>) or less are exempt from the 10 percent justification process. The justification is to indicate why the deviation was made, not just who authorized it. As a minimum, the spaces considered irreducible are Operating Rooms, Examination Rooms, Treatment Rooms, Provider's Offices, Emergency Rooms, Dental Treatment Rooms, Labor Rooms, Delivery Rooms, Diagnostic and Therapeutic Radiology Rooms, and Patient Bedrooms/Toilets. Depending on function and mission, there may be other rooms identified by the using Military Department which will be identified as irreducible, and,
- m) Provide a total summary of each column.

After the above is accomplished, prepare a Net to Gross ratio in the same format as provided in the Program For Design (PFD).

FIGURE 2-6 (continued)

NET TO GROSS SQUARE METER (GSM)<sup>1</sup> CALCULATIONS

FACILITY W/O HARDENING  
NEW/REPLACEMENT PROJECT

ALLOWANCES/CATEGORIES

	MEDICAL/ DENTAL CLINICS	AMBULATORY HEALTH CARE FACILITIES	STATION/ COMMUNITY HOSPITALS	REGIONAL MEDICAL CENTERS
TOTAL NSM <sup>2</sup>	NSM	NSM	NSM	NSM
MECHANICAL	11.0% of NSM	13.0% of NSM	14.0% of NSM	16.0% of NSM
CIRCULATION of NSM	41.0% of NSM	41.5% of NSM	42.0% of NSM	46.0%
WALLS & PARTITIONS	14.0% of NSM	15.0% of NSM	15.5% of NSM	15.5% of NSM
HALF AREAS	1.5% of NSM	1.5% of NSM	1.5% of NSM	1.5% of NSM
FLEXIBILITY	1.0% of NSM	1.0% of NSM	1.0% of NSM	1.0% of NSM
TOTAL GSM	168.5% of NSM	172.0% of NSM	174.0% of NSM	180.0% of NSM

## NOTES:

1. GSM = Gross Square Meter
2. NSM = Net Square Meter
3. For hardened facilities, increase walls & partitions allowance by 1.0%; and half areas allowance by 2.0%.
4. For addition/alteration projects, up to 15% of the gross total alterable space may be added to the flexibility allowance to offset physical constraints in the existing facility. Gross alterable space is defined as the existing net space, interior partitions, departmental circulation, and mechanical spaces within the departmental/functions included in the Program for Design, plus general circulation immediately adjacent to the affected departments/functions. This increased allowance, which for programming and planning purposes will be considered to be new or addition scope, must be validated during design.
